Cowlairs 2016 Timetable

This timetable reflects the service of spring / summer 2016 when Glasgow Queen St was closed for remodelling. The timetable is set up with days of the week and some further 'probability' trains so gives a good variety. It is suitable for a single player.

Timetable MUST be run in EGIP mode
Timetable runs from 04:00 to 04:00 next day (ie 28:00 in sim time)
The following four signals should be set with a reminder :
CQ245, CQ53, CQ241, CQ427.

Services were reduced with diversions to Glasgow Queen St Low level (West Highland, Edinburgh and Stirling services) or to Glasgow Central (Aberdeen / Inverness services).

Basic services

Helpful hints

Timekeeping was critical and this timetable is therefore quite 'fragile', there are rules to ensure that a late train into the Low level circuit will re-enter late as well. This also applies to the WHL trains that ran ECS to and from Hyndland loop.
A number of trains have significant recovery time so as to run to 'normal' times once out of Glasgow. There is much scope for trapping trains and creating 'Mexicans'.
