

Waterloo SimSig timetable (17 January 2004)

A winter Saturday with some heavy engineering works around Vauxhall. At least the crane won't fall over like it did on the 3rd Jan ! The fast lines, and up slow, are blocked

Train details given in the ARS pop-up information.

Revised timetable for South West Trains services, taken from the special timetable issued for the day.

- Up main line fast services diverted via Staines
- Up main line stopping services diverted via East Putney
- All down trains running on down slow
- Reduced Windsor lines services.

Platforming is as seen on the day with assumed ECS movements.

The only modification is that trains are run via DWF from Queenstown Road. On the day the UWF was used in the wrong direction to PL W1047, but SimSig can't do that.

- Silverlink Metro services as timetable.
- Wales & Borders services did not run on this day.
- Eurostar services as Jan 2004 timetable, platforming and ECS guessed from those seen on the day.

- 6Z## and 8Z## are the possession trains which block the appropriate lines.

Credit also to the author of 'Summer 2003' on which this is based, it saved a lot of typing !

Two contemporary splash screen images are also provided, to use these copy to the C:\Users\Public\Documents\SimSig\Simulations\waterloo folder (or OS equivalent)
